Overall Summary of  
Amended Complaint

Date: 7-29-2023

I Felipe Acevedo #67247-054, duly swear  
that all this INFORMATION THAT IS STATED IS ALL TRUE  
AS WELL AS FACTUAL.

On August, 6, 2023, The PLAINTIFF SUFFERED FROM  
A GUN SHOT WOUND TO HIS RIGHT FOOT. HE WAS TAKEN TO  
HARLEM HOSPITAL'S EMERGENCY ROOM FOR TREATMENT.

The listed doctor's, Samantha Revello, Rajesh H Dhillon,  
Sukhman Kaur, TOOK X-RAYS AND STATED THAT THERE ARE  
NO BROKEN/FRACTURED BONES. (HARLEM-HOSPITAL-EXHIBIT, PAGE 24)

DR. KATHERINE BRUCE, AGREED THE IMAGE WAS  
NEGATIVE FOR ACUTE FRACTURES/BROKEN BONES. (HARLEM-HOSPITAL  
EXHIBIT PAGE 10). THE PLAINTIFF WAS DISCHARGED THAT SAME DAY  
WITH NO CAST, SPLINT, SURGERY OR ANY PAIN MEDICATION.  
AN ORTHO SHOE WAS PROVIDED TO MANAGE THE PAIN, PATIENT  
WAS INSTRUCTED TO TAKE TYLENOL OR MOTRIN. (HARLEM-HOSPITAL  
EXHIBIT PAGE 10). HE WAS DISCHARGED PREMATURELY, WITH HIS  
FOOT STILL IN EXCRUCIATING PAIN, BEING TAKEN INTO POLICE  
CUSTODY AND TRANSPORTED TO N.Y.P.D'S 25<sup>TH</sup> PRECINCT.

THE PLAINTIFF WAS INTERROGATED & FORCED HIM TO  
STAND AND WALK ON A RAW AND UNTREATED GUN SHOT WOUND  
WITH BROKEN/FRACTURED BONES. FOR 6 IN A HALF HOURS,  
THEY MADE HIM WALK FROM A CELL TO AN INTERROGATION  
ROOM OVER AND OVER AGAIN, CAUSING THE PLAINTIFF TO  
SUFFER SIGNIFICANT AND LIKELY PERMANENT NERVE DAMAGE  
AND DISFIGUREMENT TO THE INJURED FOOT.

The ortho shoe and bandages were visibly soaked in blood, throughout the rest of the day while in police custody. When released after several hours, he was shoved out into the street without any further medical treatment. All of this could have been avoided if Harlem Hospital would have had acted appropriately.

On August, 11, 2023, the Plaintiff returned to Harlem Hospital alerting medical staff that his foot was still in excruciating pain. A Dr. Cameron Wilkinson and Sebastian Valdivieso Rueda, determined once again that the x-rays showed no broken/fractured bones. (Harlem Hospital- Exhibit page 2)

The Plaintiff requested, but was denied the appropriate pain medication. He was given crutches after the fact the Plaintiff had to ask for them.

The medical staff in Harlem Hospital's emergency room did nothing, but give the Plaintiff a cane and an ortho shoe. The Plaintiff was disgusted with the staff at Harlem Hospital. (Harlem Hospital Exhibit page 2)

Finally, on August, 15, 2023, the Plaintiff wanted a second opinion on his condition. He went to Mount Sinai Hospital Emergency Room, for that second opinion. Unlike Harlem Hospital, Mount Sinai treated the Plaintiff's injury and him with respect, as well as diligence. They kept the Plaintiff over night in the Emergency Room to run the appropriate tests.

UNLIKE Harlem Hospitals STAFF That Failed To Comply.

The PLAINTIFF had COMMINUTED FRACTURES of The INFERIOR HALF of the INTERMEDIATE CUNIFORM. ADDITIONAL COMMINUTED FRACTURES of THE MEDIAL/ DORSAL ASPECT and MULTIPLE SMALL ADJACENT OSSCous FRAGMENTS, LIKELY REPRESENTING THE COURSE OF THE GUNSHOT WOUND THROUGH HIS RIGHT FOOT. (MOUNT SINAI HOSPITAL-EXHIBIT, ZOF6 p10).

MOUNT SINAI HOSPITAL TREATED THE PLAINTIFF WITH A SPLINT-CRUTCHES WERE GIVEN AND A SCRIPT FOR PHYSICAL THERAPY. THE PLAINTIFF WAS GIVEN OXYCODONE (PERCOCEP), MOUNT SINAI HOSPITAL-EXHIBIT, p-2-9.<sup>15</sup>) FOR PAIN MANAGEMENT.

TO CONCLUDE, HARLEM HOSPITAL'S DOCTORS PREMATURELY DISCHARGED THE PLAINTIFF NEGIGENTLY, FAILING TO NOTICE THE PLAINTIFF'S MULTIPLE FRACTURES/BROKEN BONES. THE STAFF IGNORED HIS REQUEST FOR PAIN MEDICATION, AND FAILED TO GIVE THE PLAINTIFF'S GUNSHOT WOUND THE TREATMENT THAT IT SEVERELY NEEDED.

PLEASE ALLOW ME THIS BRIEF MOMENT TO THANK YOU FOR YOUR TIME, EFFORT AND CONCERN IN THIS MATTER. I TRULY HOPE AS WELL AS PRAY THAT I WILL HEAR BACK FROM YOU SOON.

FROM: Felipe ACEVEDO  
67247-054

CT FOOT RIGHT WITH CONTRAST  
Collected on 8/15/2023  
Resulted on 8/15/2023  
Authorized by  
Ruhayet Hossain, MD

**Narrative**

Clinical history: Gunshot wound to the foot. Technique: Multiple axial images through the right foot were obtained utilizing soft tissue and bone algorithms. Sagittal and coronal reconstructions were obtained from the primary data set. Dose reduction techniques were utilized including kVp/mA dose modulation based on patient size and iterative reconstruction. IV Contrast: 100 mL Isodue 370. Radiation dose estimate (dLP): 201 mGy-cm. Comparison: None. Findings: Bones and joint spaces: Comminuted fracture of the inferior half of the intermediate cuneiform. There are additional comminuted fractures of the medial/dorsal aspect of the lateral cuneiform and lateral/dorsal aspect of the medial cuneiform. There are multiple small adjacent osseous fragments extending towards the dorsal/lateral aspect of the foot, likely representing the course of the gunshot wound (series 4, image 43). Soft tissues: No disproportionate muscle atrophy. Diffuse soft tissue swelling surrounding the foot. No fluid collections.

**Impression**

Impression: Comminuted fractures of the medial, intermediate and lateral cuneiforms, likely from patient's reported history of gunshot wound as described above. Diffuse soft tissue swelling surrounding the foot. Attending physician note: I agree with the above preliminary report.

Comment: Effective February 15, 2022 the estimated Glomerular Filtration Rate (eGFR) for adults 18 and older will be reported using the Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI) 2021 creatinine equation that does not use a race coefficient. This replaces the 2009 CKD-EPI creatinine equation that was previously reported (without its race coefficient) from December 8, 2020 to February 14, 2022. The 2021 CKD-EPI creatinine equation is based on serum creatinine, age, and assigned sex at birth. One eGFR is reported per creatinine value. For transgender and gender expansive patients, an individualized and multi-disciplinary approach is needed when interpreting eGFR.

Comment:  
Effective February 15, 2022 the estimated Glomerular Filtration Rate (eGFR) for adults 18 and older will be reported using the Chronic Kidney Disease Epidemiology Collaboration (CKD-EPI) 2021 creatinine equation that does not use a race coefficient. This replaces the 2009 CKD-EPI creatinine equation that was previously reported (without its race coefficient) from December 8, 2020 to February 14, 2022. The 2021 CKD-EPI creatinine equation is based on serum creatinine, age, and assigned sex at birth. One eGFR is reported per creatinine value. For transgender and gender expansive patients, an individualized and multi-disciplinary approach is needed when interpreting eGFR.

Accession number: 1010109506		Resulting lab: RADIOLOGY MAIN

Narrative:  
Clinical history: Gunshot wound to the foot

Technique: Multiple axial images through the right foot were obtained utilizing soft tissue and bone algorithms. Sagittal and coronal reconstructions were obtained from the primary data set. Dose reduction techniques were utilized including kVp/mA dose modulation based on patient size and iterative reconstruction.

IV Contrast: 100 mL Isovue 370

Radiation dose estimate (dip): 201 mGy-cm.

Comparison: None

Findings:

Bones and joint spaces: Comminuted fracture of the inferior half of the intermediate cuneiform. There are additional comminuted fractures of the medial/dorsal aspect of the lateral cuneiform and lateral/dorsal aspect of the medial cuneiform. There are multiple small adjacent osseous fragments extending towards the dorsal/lateral aspect of the foot, likely representing the course of the gunshot wound (series 4, image 43).

Soft tissues: No disproportionate muscle atrophy.

Impression:

Impression:

Comminuted fractures of the medial, intermediate and lateral cuneiforms, likely from patient's reported history of gunshot wound as described above.

THIS IS A PRELIMINARY RESIDENT REPORT. FINAL ATTENDING REPORT TO FOLLOW.

#### Imaging - Radiology Results (continued)

##### CT FOOT RIGHT WITH CONTRAST [617905741] (continued)

Resulted: 08/15/23 2157, Result status: Final result

Technique: Multiple axial images through the right foot were obtained utilizing soft tissue and bone algorithms. Sagittal and coronal reconstructions were obtained from the primary data set. Dose reduction techniques were utilized including kVp/mA dose modulation based on patient size and iterative reconstruction.

IV Contrast: 100 mL Isovue 370

Radiation dose estimate (dGy): 201 mGy-cm.

Comparison: None

Findings:

Bones and joint spaces: Comminuted fracture of the inferior half of the intermediate cuneiform. There are additional comminuted fractures of the medial/dorsal aspect of the lateral cuneiform and lateral/dorsal aspect of the medial cuneiform. There are multiple small adjacent osseous fragments extending towards the dorsal/lateral aspect of the foot, likely representing the course of the gunshot wound (series 4, Image 43).

Soft tissues: No disproportionate muscle atrophy. Diffuse soft tissue swelling surrounding the foot. No fluid collections.

Impression:

Impression:

Comminuted fractures of the medial, intermediate and lateral cuneiforms, likely from patient's reported history of gunshot wound as described above. Diffuse soft tissue swelling surrounding the foot.

Attending physician note: I agree with the above preliminary report.

EXAM: Three views of the right foot

HISTORY: Foot fracture

COMPARISON: None

#### FINDINGS/IMPRESSION:

Faint scattered lucency mainly in the intermediate cuneiform, which correlates to the fracture seen on same-day CT right foot. There is a faint linear lucency along lateral/plantar aspect of the median cuneiform also correlating to a fracture seen on same-day CT foot and best seen on the oblique view.

The joint spaces are preserved.  
No significant soft tissue swelling.

THIS IS A PRELIMINARY RESIDENT REPORT. FINAL ATTENDING REPORT TO FOLLOW.
